Marketing

Software engineer with 15+ years of commercial experience.

Senior software engineer with extensive experience in PHP, specializing in building high-load backend services and REST APIs with Symfony and Symfony components. Possesses excellent knowledge of modern PHP internals, strict typing, and object-oriented design principles. A strong advocate for TDD and strict code quality, maintaining static analysis at PHPStan level max with no suppressions, custom analyzer rules, and automated testing via PHPUnit. Proficient in database architecture, hand-written SQL, and MySQL query tuning beyond ORM-mediated access. Experienced in modernizing legacy PHP applications using Rector and PHP CS Fixer, integrating complex third-party APIs, and using AI-assisted development tools like Claude Code and Codex while maintaining full code control.

Programming Languages

PHP, JavaScript, TypeScript.

Backend

Symfony, Laravel, Yii2, REST, PHPUnit, PHPStan, PHP CS Fixer, Elasticsearch, Memcached, Meilisearch, Doctrine ORM, Composer, Salesforce, Grafana, XHProf, OpenAPI, JSON, XDebug, SOAP, Typesense, SendGrid, Rector, Playwright, Monolog, Cachier, Pennant, Vercel, Pods, Symfony Components, Podman, XML.

Frontend

React, Next.js, Angular, HTML, CSS, Bootstrap, Twig, Ajax, jQuery, NPM.

Message brokers

RabbitMQ, AWS (SQS).

Cloud

AWS (S3, EC2, SQS, SNS, RDS, CloudWatch, Lambda, CloudFront).

Databases

MySQL, Redis.

AI Tools

OpenAI API, Claude Code, Codex.

Third-party

Stripe, Hubspot, Slack, OroCommerce, ActiveCampaign.

DevOps

Docker, Docker Compose, Nginx, Apache, Jenkins, GitLab CI/CD, Varnish, Linux, LXC, platform.sh.

Source Control Systems

Git, GitHub, GitLab, BitBucket.

Projects

AI-POWERED PLATFORM

The project is a multi-tenant SaaS platform for AI-powered content generation, localization, and semantic/multimodal search used by e-commerce companies to automate product content workflows at scale. It combines AI generation, translation, workflow automation, semantic search, and complex multi-locale content management into a single ecosystem.

Project roles

Tech Lead / Software Engineer

Period

03.2025 – Till now

Responsibilities & achievements

- Led the architecture and development of a standalone high-load search engine, enabling horizontal scalability and improving response times;
- Designed a rerun engine and asynchronous RabbitMQ pipelines for AI workflows, adding a Redis caching layer to handle high concurrency;
- Engineered backend services in modern PHP using Symfony and Symfony components,

Domains: eCommerce & retail, Artificial Intelligence, SaaS.

keeping REST APIs backed by accurate OpenAPI specifications;

- Enforced a strict test-first TDD methodology for every bug fix and feature, adding custom PHPStan rules to prevent recurring classes of bugs;
- Maintained strict type safety and static analysis at PHPStan level max with no suppressions across all backend codebases;
- Refactored and modernized legacy PHP code without breaking production using Rector, PHP CS Fixer, and PHPUnit;
- Designed MySQL database schemas, wrote hand-written SQL queries, tuned indexes, and bypassed Doctrine ORM where raw database performance was required;
- Directed the technical redesign of core domains and integrated Plytix PIM alongside an OAuth-based multi-tenant onboarding flow;
- Guided the implementation of a multi-locale newsletter builder and translation workflows to ensure data integrity;
- Resolved performance bottlenecks by fixing memory leaks, N+1 queries, and vector processing issues in production;
- Integrated AI-assisted development tools using Claude Code and Codex into daily workflows while maintaining strict control over code quality;
- Reviewed pull requests to maintain code quality, naming conventions, and testing practices across the engineering team.

Environment

PHP 8.2/8.4, Symfony, Symfony Components, Doctrine ORM, MySQL, PHPStan, PHP CS Fixer, Rector, PHPUnit, JavaScript, TypeScript, React, Next.js, Meilisearch, Typesense, OpenAI, Claude Code, Codex, RabbitMQ, Redis, OpenAPI, Docker, Podman, LXC, Linux, Git, GitHub, Bitbucket, AWS (EC2, S3, RDS, CloudWatch),

CLIENT MARKETING PLATFORM

A digital marketing platform that delivers customized marketing solutions for various clients. It integrates clients' existing CRM and internal systems into a unified, agency-managed CRM to streamline workflows, enhance data organization, and support more efficient, data-driven marketing campaigns.

Domains: Advertisements, Marketing, CRM.

Grafana

Project roles

Software Engineer

Period

04.2023 – 03.2025

Responsibilities & achievements

- Developed, maintained, and enhanced the Laravel API backend, ensuring robust and scalable functionality for campaign, task, and client management while seamlessly integrating with a React frontend;
- Designed and implemented new features, integrating multiple client CRMs and platforms including OroCommerce, Salesforce, HubSpot, ActiveCampaign, SendGrid, Stripe, and Slack, creating flexible and secure API endpoints to synchronize complex data structures;
- Optimized API and application performance using Redis caching strategies, database indexing, and Laravel Telescope, reducing latency and improving responsiveness for high-volume campaign data;
- Developed and maintained comprehensive automated test suites, ensuring reliability and regression-free deployment of API endpoints and integrations;
- Enhanced database efficiency by optimizing queries, indexing strategies, and handling large datasets, resulting in faster retrieval and improved system scalability;
- Collaborated closely with stakeholders, translating business requirements into technical solutions, and maintained clear client communication to ensure alignment of project

EDUCATIONAL LEARNING PLATFORM

An educational platform based in the United States that provides interactive and engaging learning experiences for students. It aims to support academic progress and foster the development of essential skills through a dynamic, student-centered approach.

Domains: Education.

goals, timelines, and deliverables;

- Implemented best practices in CI/CD pipelines using GitLab CI/CD, ensuring smooth deployment workflows and continuous delivery to Platform.sh, AWS, and Vercel environments;
- Mentored team members and contributed to improving coding standards, documentation, and development workflows to enhance overall team productivity and project maintainability.

Environment

PHP 8.2, JavaScript, TypeScript, Laravel, Symfony, React, Next.js, REST, MySQL, Redis, Cachier, HTML / CSS, Pennant, Playwright, GitLab CI/CD, OroCommerce, Salesforce, HubSpot, ActiveCampaign, SendGrid, Stripe, Slack, Platform.sh, Composer, NPM, AWS (EC2, S3, Lambda, SQS, SNS), Vercel, Git / GitLab.

Project roles

Software Engineer

Period

08.2019 – 04.2023

Responsibilities & achievements

- Developed and maintained backend features using the Symfony framework, ensuring robust support for educational services and interactive learning modules;
- Implemented new functionalities and system enhancements to improve platform performance, scalability, and overall user experience;
- Designed, built, and maintained RESTful APIs to facilitate seamless communication between frontend and backend systems, integrating with external third-party services;
- Optimized database queries and implemented caching to ensure fast, efficient data retrieval for

COMMERCIAL REAL ESTATE TECH PLATFORM

A technology company in the commercial real estate sector focused on improving its online presence. The project includes continuous website maintenance and the development of new features to deliver a smooth user experience and expand the platform's functionality in line with client and user needs.

large user and content datasets;

- Conducted automated testing using PHPUnit, ensuring high reliability and regression-free deployments;
- Collaborated closely with a small, cross-functional development team, participating in code reviews, pair programming, and knowledge sharing to maintain high code quality;
- Monitored system performance and implemented proactive optimizations, reducing latency and improving overall platform responsiveness;
- Integrated Elasticsearch to implement fast and accurate search functionality for educational content and student progress tracking;
- Contributed to the continuous improvement of development processes, including implementing best practices, code standards, and performance monitoring strategies.

Environment

PHP 7.2 / 8.0, Symfony, REST API, Twig, HTML / CSS, Bootstrap, Composer, Doctrine ORM, MySQL, Redis, Elasticsearch, PHPUnit, Docker, Docker Compose, Jenkins, Nginx, Git / GitHub.

Project roles

Team Lead / Software Engineer

Period

04.2018 – 08.2019

Responsibilities & achievements

- Developed, enhanced, and maintained website functionality using Laravel, Angular, and TypeScript, ensuring a seamless and interactive user experience across desktop and mobile platforms;
- Utilized Docker for containerized development

Domains: Real Estate.

and deployment, streamlining workflows, improving environment consistency, and accelerating feature delivery;

- Configured, maintained, and optimized AWS cloud infrastructure (EC2, S3, Lambda, RDS, CloudFront) to ensure high availability, scalability, and secure hosting of the platform;
- Engineered custom backend components and administrative tooling to meet project requirements, enhancing content management capabilities and improving operational workflows;
- Led development and project management efforts, coordinating feature implementation, timelines, and team collaboration to ensure successful and timely delivery;
- Optimized database queries and leveraged Redis caching to improve website performance and reduce response times for high-traffic periods;
- Designed and maintained RESTful APIs for smooth communication between frontend and backend systems, supporting integrations with third-party tools and services;
- Conducted automated testing using PHPUnit and Artisan commands to ensure system reliability, code quality, and regression-free deployments;
- Implemented responsive design and UI improvements using Bootstrap and HTML/CSS, enhancing usability and visual consistency across devices;
- Monitored system performance, identified bottlenecks, and applied proactive optimizations to ensure continuous reliability and a smooth user experience.

Environment

PHP 8, TypeScript, JavaScript, Laravel, Angular, REST, MySQL, Redis, HTML / CSS, Bootstrap, Composer, PHPUnit, Nginx, Docker, Docker Compose, AWS (EC2, S3, Lambda, RDS,

PEER-TO-PEER FINANCE PLATFORM

A peer-to-peer platform that connects investors and borrowers, facilitating secure and efficient financial transactions. The platform is designed to simplify lending and investing while offering a transparent and user-friendly experience for all users.

Domains: Financial services.

CloudFront), Git / GitHub.

Project roles

Software Engineer

Period

01.2017 – 04.2018

Responsibilities & achievements

- Developed, maintained, and optimized backend functionalities using PHP and Symfony, ensuring robust, secure, and efficient code for high-volume financial transactions;
- Implemented new platform features, enhancing user experience, platform reliability, and scalability for peer-to-peer lending and investing;
- Integrated and managed SOAP- and REST-based APIs to enable seamless communication between platform components and external financial services, ensuring secure and accurate data exchange;
- Designed and maintained Elasticsearch-based search functionality for fast, precise querying of loans, investors, and transaction histories;
- Utilized RabbitMQ for reliable asynchronous task processing, including transaction notifications, background processing, and event-driven workflows;
- Optimized database queries and leveraged Redis caching to reduce latency, improve performance, and handle large volumes of financial data efficiently;
- Implemented automated testing using PHPUnit to maintain code quality, ensure system reliability, and prevent regressions during feature deployment;
- Monitored system performance, identified

DIGITAL ADVERTISING PLATFORM

An online advertising platform that allows businesses to manage, deliver, and optimize digital ad campaigns efficiently. It streamlines campaign management, enhances targeting, and provides analytics to improve reach and overall performance.

Domains: Telecommunications.

bottlenecks, and implemented proactive optimizations in backend services and database layers, improving responsiveness and platform stability;

- Configured and managed containerized development and deployment environments using Docker and Docker Compose, ensuring consistency across staging and production systems;
- Maintained comprehensive logging and error monitoring using Monolog, enabling rapid issue identification and resolution while ensuring secure transaction processing.

Environment

PHP, Symfony, Doctrine ORM, SOAP, REST, MySQL, Twig, HTML / CSS, Composer, PHPUnit, Redis, Elasticsearch, RabbitMQ, Monolog, Docker, Docker Compose, Nginx, Git / GitHub.

Project roles

Software Engineer

Period

09.2015 – 01.2017

Responsibilities & achievements

- Developed, maintained, and optimized backend and frontend components using the Yii2 framework, ensuring stable and high-performance support for the ad-serving platform;
- Implemented new features and enhancements to improve ad delivery efficiency, precise user targeting, and comprehensive campaign management capabilities;
- Designed, optimized, and maintained MySQL database schemas, ensuring efficient storage, retrieval, and processing of large-scale ad

ONLINE GAMBLING REVIEW PLATFORM

An online portal that offers comprehensive reviews of gambling and betting platforms. It provides users with detailed insights, ratings, and guides to

campaign data;

- Leveraged Redis caching to accelerate data access and improve platform responsiveness under high-traffic conditions;
- Created dynamic, interactive UI elements using JavaScript, jQuery, AJAX, HTML, and CSS, enhancing usability and real-time user interaction;
- Developed automated testing procedures using PHPUnit to maintain code quality, ensure reliability, and prevent regressions during feature deployment;
- Managed and monitored server environments on Nginx and Apache, ensuring secure, stable, and scalable hosting for the advertising platform;
- Designed and implemented JSON and XML-based API integrations for ad tracking, reporting, and third-party service communication;
- Monitored system performance, identified bottlenecks, and implemented proactive optimizations, significantly improving ad serving speed and platform stability;
- Collaborated with cross-functional teams to gather requirements, prioritize features, and ensure alignment between technical implementation and business goals.

Environment

PHP, JavaScript, Yii2, MySQL, HTML / CSS, AJAX, jQuery, Composer, PHPUnit, Redis, Apache, JSON, XML, Git / GitHub.

Project roles

Software Engineer

Period

09.2012 – 09.2015

Responsibilities & achievements

- Developed, maintained, and extended the

help make informed decisions when choosing online casinos and related services.

Domains: Entertainment, Gambling.

platform using custom PHP architecture, creating data models, entity relationships, and templates to support detailed casino reviews and guides;

- Implemented new features and enhancements to improve user experience, interactivity, and functionality of review and rating systems;
- Utilized Xdebug and XHProf for in-depth profiling and debugging, identifying performance bottlenecks, and implementing targeted code optimizations;
- Maintained and refined caching strategies to ensure scalability and stability under high traffic loads, particularly during peak user activity periods;
- Enhanced frontend interactivity using HTML, CSS, JavaScript, and jQuery, improving usability and visual consistency across devices;
- Designed and optimized MySQL database queries for efficient retrieval of review content, user ratings, and related metadata;
- Monitored system performance, applied proactive optimizations, and resolved technical issues to maintain a seamless user experience;
- Collaborated with content and SEO teams to ensure technical implementation aligned with business objectives and improved search engine visibility;
- Managed server environments on Nginx and Apache, ensuring secure, stable, and scalable hosting of the application platform.

Environment

PHP, JavaScript, Pods, Xdebug, XHProf, Varnish, Memcached, MySQL, HTML / CSS, jQuery, Composer, Nginx, Apache, Git / GitHub.

SPORTS AND FITNESS CLUB

Project roles

MANAGEMENT SYSTEM

A web-based management system for sports and fitness clubs. The project includes the introduction of a new module and refactoring of the existing system, implementing a modern architecture to enhance performance, scalability, and support future development.

Domains: Healthcare.

Software Engineer

Period

10.2010 – 09.2012

Responsibilities & achievements

- Developed and implemented new system features using Symfony and JavaScript, enhancing functionality for sports and fitness club management;
- Participated in refactoring legacy modules, improving code maintainability, aligning with modern architectural standards, and enabling future scalability;
- Integrated SOAP-based services to facilitate seamless communication with third-party systems, ensuring accurate and secure data exchange;
- Optimized database queries and MySQL schema design to improve performance, reduce latency, and handle large datasets efficiently;
- Enhanced frontend interactivity and user experience using jQuery, HTML, and CSS, creating intuitive interfaces for club administrators and members;
- Collaborated with cross-functional teams to gather requirements, prioritize features, and ensure technical solutions met business objectives;
- Conducted testing and debugging to maintain system reliability, prevent regressions, and ensure smooth operation of new and refactored modules;
- Monitored system performance and implemented proactive optimizations to maintain responsiveness and scalability under growing usage loads;
- Managed server environments on Apache and Nginx, ensuring secure, stable, and optimized hosting of the web application;

- Documented technical processes, architectural changes, and integrations to support ongoing development and knowledge sharing within the team.

Environment

PHP, JavaScript, Symfony, jQuery, SOAP, MySQL, HTML / CSS, Composer, Apache, Nginx, Git / GitHub.
